This game ended up determining the clear winner of the 2008 European Championship. This game ended up determining the clear winner of the 2008 European Championship.Tiviakov: 'This game from the last round of the European Championship was extremely important. Only this victory allowed me to win the tournament alone, without any tie. There were 8 players in the lead before the start of the last round and I was the only one to win (the other 3 games were quick draws). Emil also offered me a draw in the evening before this game. But being White in the last round and also having a big positive score against Emil I saw no single reason to accept it.
' Tiviakov: 'Diese Partie aus der letzten Runde der Europameisterschaft war extrem wichtig. Nur durch diesen Erfolg war es mir möglich, alleiniger, ungeteilter Turniersieger zu werden. Vor dem Start der letzten Runde führten 8 Spieler punktgleich, und ich war der Einzige, der gewann. Emil hatte mir am Vorabend der Partie ebenfalls Remis angeboten. 8...Be6 9.Nxe6 fxe6 10.Qxb7 Rc8

11.0-0 Reaching a critical position. Initially, with material level it seems self-evident that White must be better, but when you drill into it questions start to arise about how they can actually complete queenside development.
11...Qd7N Maybe the main thing Carlsen did wrong all game was this barely perceptible late opening inaccuracy.
[11...Be7 12.Bb5 Qc7! 13.Qxc7 Rxc7 and, with Black's castling rights intact and ideas like . ..Bf6 and ...Nf4 not too far away, three results are possible.]
12.Qb5 -0.04/18
[12.Qxd7+ Kxd7 13.Bb5±

Here Black's centre comes under serious question and White is ready in many cases to ditch the c3-pawn, or advance it and then try to blockade on e4.]

12...Be7= 13.Bb3 0-0 14.Qd3 Na5 15.Bd1 Rfd8 0.36/17

[15...Nb7= -0.02/16 should be considered.]

16.Bf3 -0.19/21 It seems that at this point the pressure of needing to do something regarding the central pawns got to Carlsen. In reality he had fair chances of an advantage by continuing to leave that particular ball in White's court.

[16.Qh3± 0.36/17]

16...dxc3

[16...Nf6!? is interesting, and creates ideas of ...e4 followed by ...dxc3 which White has to manage quite carefully.]

[Another fascinating possibility is 16...Nb7 , intending to shepherd the central pawns onward with help from the second knight.]

[16...Nf6 is more complex. 17.Qe2 d3 18.Qe1 Nc4]

17.Nxc3 Nxc3 18.Qxd7

[If White had realised that there were significant losing chances in the ending, maybe they would have ventured something like 18.Qa6 when the pressure on the e6-pawn keeps Black honest.]

[Dave Smerdon discussed this line in the Archives, including the main move 15.Nf3 - see Z.Tomazini - G. Adrelean, EICC 2013 (0-1 in 63). I'd never seen Mamedyarov's move before, but it makes some sense, supporting the strong knight on e5. 14.Bh6N -0.76/23 A new move for us. I played 14.Rd1 in my game with Camacho Collados, which I analysed in the Archives. Dave Smerdon covered 14. Bxc6 in his notes to D. Howell - S.Ansell, King's Place Rapid 2015 (1-0 in 27), which has the benefit of eliminating Ding's response.

[After 14...Bf6 0.33/19 14...Qxd4 -0.83 I strongly suspect White's best option is to take on c6 (bringing either rook to d1 leaves Black comfortable after 15...Rac8), which suggests that there isn't much upside to this move order compared to 14. Bxc6 bxc6 15.Bh6.]

15.Qg3 The most popular move, and the best attempt at demonstrating compensation for the pawn. **15...Bd6**

[15...Bf6 16.Be3 Qb4 17.Rab1 Rac8∓ and White had insufficient compensation in A.Karpov (a different one!) - R.Kezin, Novosibirsk 2012 (0-1 in 32).]

[18...Qa4 -0.23/19 should be considered.]

19.axb4 -0.35/21 Typical play for White in this system. The queen's retreat to e2 has several purposes. First of all White frees the d3-square and is ready to double rooks on the d-file. Secondly, 19. ♕e2 prepares the transfer of his bishop to the diagonal c8-h3. Finally, the queen

runs away in case Black transfers the knight to c5.

[19.Nc4= 0.25/20 Qd8 20.axb4]

Black has 3 sensible ways of parrying the check, and this has been the most popular overall, although the alternatives remain very relevant: **6.Bb3 c4** One of Black's two main replies here, other being: **7.Bc2** Black's idea is to play ...b7-b6 and ...Bc8-b7 as quickly as possible in order to neutralize the "Catalan" g2-bishop. White's move aims to slow down that plan and has scored well in recent years. Several games in the PGN Archives have examined other ideas, for example: **7...d6** A necessary precursor to ...b7-b6, since with White's queen off the c4-square, Black cannot go for this immediately: **8.exd6** Move orders around this point are flexible, but White usually goes for a setup involving d2-d3 and a2-a4. In this game, Ganguly introduces an interesting new idea by skipping the a2-a4 thrust and developing the knight with Nb1-a3-c4 more quickly. Instead the mainline position arises after the sequence: **8...Qxd6** Black prepares the fianchetto anyway, but White argues that 7 Qb3 is a more useful move than 7... Rb8. Neil McDonald: 'According to Nimzowitsch, a strong point (which is basically a square in your possession which is of key strategic value) should be overprotected. That is to say, it should be protected in excess of any possible threat against it. Nimzowitsch explains that the relationship is mutually beneficial: the strong point gains the greatest possible security from being overprotected, while it radiates a constant source of energy from which the overprotecting pieces can draw new strength. Overprotection is also associated with prophylaxis, the restraint of the opponent's ideas, as by making key points invincible it frustrates any plan of attack he might devise. --- We don't hear much about overprotection these days. The word centralization often has the same function. Consider the following position which is reached after the moves:' **1.e4 c5 2.c3 d5 3.exd5 Qxd5 4.Nf3 Nf6 5.d4 Nc6**

6.Bd3 Be7 7.0-0 0-0 I've chosen this game because Black's system is becoming increasingly popular at club level. The idea is simple: Black wants to maintain the tension on d4 as long as possible to deny the white knight access to c3. This is an interesting modern philosophy, as the isolated pawn has always been considered the 'disadvantage' of the 2.c3 Sicilian. These days, however, Black has realised that constricting White's free-flowing development is more important. Like pretty much all lines of 2.c3 (or all Anti-Sicilians, or all openings in general, if you want to take it that far!), Black should be fine with best play. But Mamedov's approach with white is simple, no-nonsense and makes life a little uncomfortable for Black, even in the endgame. **8.Qe2**

[8.Be3 Rd8! is the strategy that I'm talking about. 9.Qe2 Nc6 and now after 10.Rd1 Giri took on d4, happy that White's rook is now not on its optimal square (usually, the rooks prefer d1 and e1 in these lines). cxd4 11.Nxd4?! e5 12.Nxc6 Qxc6 13.Nd2 Bg4 14.f3∓ 1/2-1/2 (36) Rabiega, R (2507)-Giri, A (2749) Germany 2014]

[Gawain's attempted improvement on the 13.h3 of Howell - Short (covered in a previous update). A thematic plan for Black in such structures is to put his queen on b6 and then start harassing the b3-knight (and the b2-

pawn) by pushing his a-pawn. To anticipate this by seizing queenside space is thematic. However, just how good White's chances are in the resulting positions is debatable. The queen on b6 will now be hitting a knight on b3 without any pawn cover. Hence White will probably have to play a5 to kick the queen away from its strong post. Once this is done, the a5-pawn will be attacked by two black pieces (the knight on c6 and the queen on the d8-a5 diagonal) and White will have to allow a queenside weakness, either on a5 or (after b4) on c3. The current game is a good illustration of this script playing out.]

...Bxf3 would now be deadly. **14.Bd3**

[Similar play to that in the game arose in D.Rosandic (2385) - O. Another game which confirms my assessment that this line poses a major headache for White to get any class of an advantage. It will remain uncommon since few players can handle both the Sicilian and the French, but for those with both in their repertoire it remains a very solid choice, with the only downside that Black's winning chances are even more limited than White's. An even fight not without its subleties.

6...Qxc5N 0.65/19 A horrible move. Black often has to choose between ...Qxd1+ and ...Qxc5 in the 2.c3 d5 lines, but almost never is it a good idea to take on c5 when there is a black knight on c6. Without the option to retreat to c7, the black queen becomes an easy target.

Here's what happens when you try to cross swords with a Grandmaster in an unusual line.
B22: Sicilian: 2 c3
1.e4 c5 2.c3 e6 3.d4 d5!?
Will it be a Philidor today, a Pirc or Modern? Perhaps a Caro-Kann? And who will choose? I have no problems with Black's move-order but the fatal flaw is that it's very passive. White can build up more or less as he or she pleases. So there might be some mileage in 3...Qc7 against a weaker player but against someone much stronger this opening line cannot be recommended. One must gamble to make a stronger player tremble play wild, risky adventurous chess-that's the way!.
4.exd5 Baklan decides to try to annihilate Black. **4...exd5?! 5.Nf3 Nc6?!**

This I really do not like. Black refuses to recognise the limitations of his opening. Denied the Philidor set-up (4 f4!), he really has to be modest with moves such as **6.Be3! c4 7.b3 cxb3 8.axb3±** White has a big advantage already. He has space and time on his side so he endeavours to open the game. 8 e5! is very strong. **8...Bd6 9.Bd3 Bg4N** Black finally gets the message, but he cannot prevent the following pawn-break.

The young British GM David Howell continues to score well with the 2.c3 Sicilian. In this game Black loses his way in a complicated line, but I think that Black was at least okay in the opening.

B22: Sicilian: 2 c3

1.e4 c5 2.c3 Nf6 3.e5 Nd5 4.Nf3 Nc6 5.Bc4

[White players are leaning towards this move order because Black has been doing fine in the main lines arising after 5.d4 cxd4 6.Bc4 Nb6 7.Bb3 d5 8.exd6 Qxd6 9.0-0 Be6 10.Na3 dxc3!]

[Andrew Martin]

Two experienced campaigners meet to contest a critical opening duel.
B22: Sicilian: 2 c3
1.e4 c5 2.c3 d5 3.exd5 Qxd5 4.d4 g6!? A move which keeps maximum tension in the position and as such ideally suited to playing for the win (or the loss). In the event of an IQP position, Black reasons that his fianchettoed Bishop will be perfectly placed. Both Pavasovic and Cebalo have plenty of previous history here, as you can see.
5.Nf3 Bg7

Anyone with an appetite for statistics might want to run a search for this position in their database and look at the long string of "0-1" results. It is true that these are largely attributable to a significant rating difference in Black's favour, with several GMs trying the line with the black pieces. In fact, the only 2400+ player on the white side in 2011 was...me! That game was about as exciting as its description indicates: S. Collins (2426) - M.Venkatesh (2455), San Sebastian 2011, (1/2 - 1/2, 13(!)).
9.Nh4 The main move and the only one I've played to date. Basically, this is the only means of stopping both ...Bf5 and ...Bg4. White waits for ...e6, when the knight will drop back, with a French Defence type position. The alternatives seem to pose fewer problems for Black. Both lead to positions which should be compared to the Advance Caro Kann.

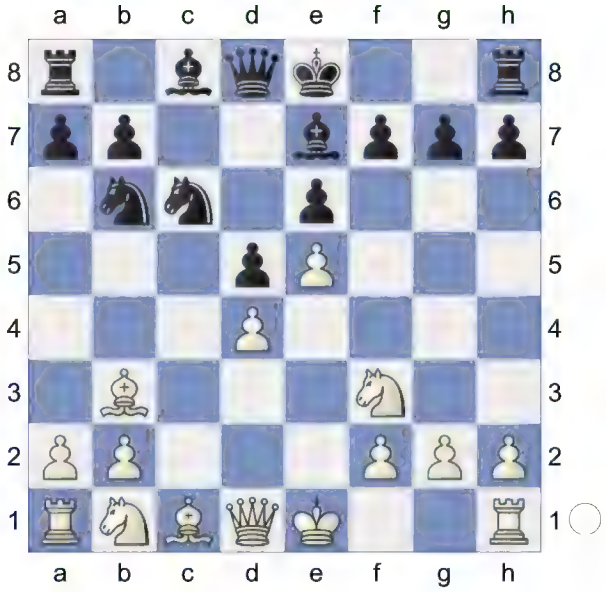
[Kraemer has used this line a bit. 9.h3 Bf5 10.Nh4 Bxb1 11.Rxb1 e6 12.Nf3 Bb4+ 13.Kf1 Be7 14.Qe2 a5 15.a3 a4 16.Bc2 Nc4 17.g3 b5 and Black looked comfortable in V. Kostic (2440) - M.Kraemer (2518), Graz 2010 (1/2-1/2 in 45).]

[9.Be3 is another direction. Black of course replies Bg4 and the game goes on.]

9...e6 10.Nf3

[White can try 10.g3 but I think it's simpler to drop the knight back immediately.]

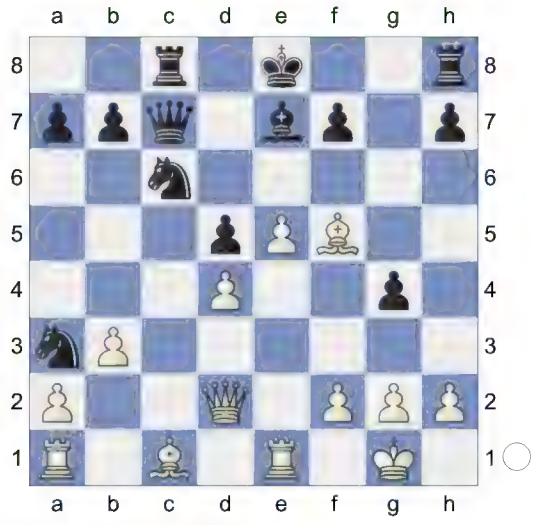
10...Be7



11.Nc3

[One of the points which annoyed me in my game against Venkatesh was what happens if Black doesn't castle and doesn't play ...f6. The continuation 11.0-0 Bd7 12.Re1 Rc8 13.Nc3 Na5 14.Bc2 Nbc4 15.Bd3 g5!? 0.53/18 featured in E.Rodriguez

Instead *(15...Bb4=* 0.15/17 *)* 16.b3± gains some squares and tries to punish Black's last move Na3 17.Qd2 and now the sedate 17...h6 18. h3 is indicated since more ambitious play can backfire with the king in the centre, for instance g4 18.Nh4! Black must now prevent Nf5! Qc7?! 1.10/20 *(18...Nc2±* 0.64/19 is more appropriate. *19.Qxc2 Bxh4)* 19.Nxd5!!± exd5 20.Nf5 Bxf5 21.Bxf5 with a winning initiative, for instance. Strongly threatening Bxa3! Nc6



22.e6! f6 23.Qh6]

11...Bd7 White is slightly better. **12.0-0** Pavasovic shook hands here with Movsesian in the European Championship 2003, but here he struggles on under the watchful gaze of the Slovenian team captain.

12...f6N 0.70/17

[A very similar earlier effort from Pavasovic continued 12...0-0 13.Bc2 f6 14.exf6 Bxf6 15.Qd3 g6 16.Bh6 Bg7 17.Bxg7 Kxg7 18.Qe2 0.27/20 *(18.Bb3!* restrains ...e5 and keeps an enduring edge*; 18.Rac1±* 0.68/18 *)* 18...e5 19.Nxe5 Nxd4 20.Qd2 Nxc2 21.Qxc2 Bf5 Prevents Qd3 22.Qd2 which was roughly level in D. Pavasovic (2597) - Z. Hracek (2613), Kallithea 2008 (1-0 in 34).]

[12...Rc8 was chosen in D. Spence (2198) - Wang Yue (2698), Gibraltar 2008 (0-1, 29), annotated by John Shaw in the Archives. By the way, 13.Ne1 was the last move in my aforementioned epic with Venkatesh.]

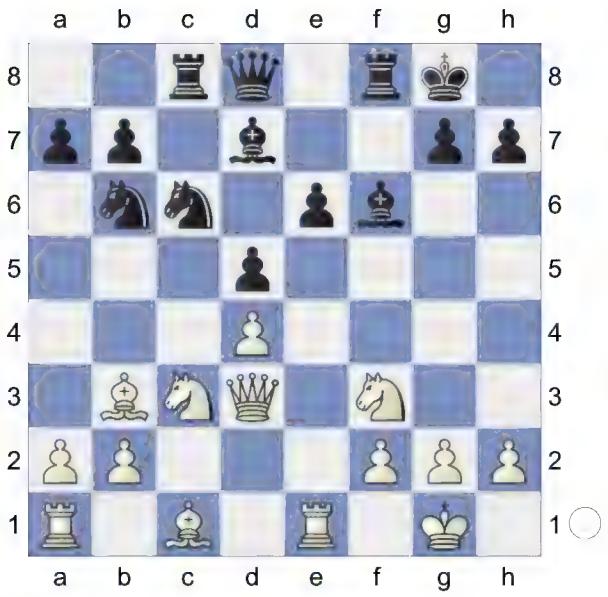
[12...Rc8= 0.26/19]

13.exf6± Bxf6 14.Re1 0-0 These positions should be compared to the French. I used to compare them to the Advance French, but in fact a closer comparator (especially when Black has played ...f6) is the Tarrasch. In particular, you might like to check the Archive for games from the variation 3. Nd2 Nf6 4. e5 Nfd7 5.Bd3 c5 6.c3 Nc6 7. Ne2 cxd4 8.cxd4 f6 9.exf6 Nxf6 10.Nf3 Bd6 11.0-0 Qc7, which is highly similar. **15.Qd3** Probably missing Black's 16th.

[15.Bf4 looks like an edge for White to me.]

15...Rc8

(Diagram)



16.a3 0.23/17 White has more active pieces.

[16.Bc2 forces g6 but, in the equivalent Tarrasch positions, Black wants to play this anyway, completing a harmonious regrouping with ...Bg7. The white queen and bishop battery looks distinctly out of place against this structure. 17.a3 Bg7 18.Ne5 Nxe5 19.dxe5 Nc4 20.Qd4 Qb6 21.Qxb6 axb6 22.f4 g5 23.g3 gxf4 24.gxf4 d4 25.Ne2 Nxe5 26.Nxd4 Ng6 27.Nxe6 Rxc2 28.Nxf8 Kxf8 29.Be3 Nh4 0-1 Spence,D (2198)-Wang Yue (2698) 6th Gibtelecom Masters 2008 (2)]

[16.Bc2± 0.66/21 g6 17.Bh6]

16...Be8! An excellent pawn sacrifice.

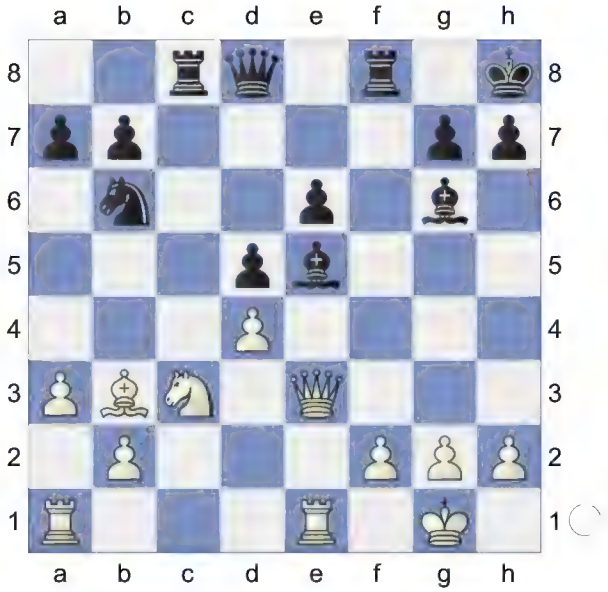
17.Bf4 Wisely declining the offer.

[17.Rxe6 White wants to play Bf4. Bg6 18.Qd1 Bh5 the pressure on the white kingside will force White to recapture with the g-pawn on f3. Given that Black is normally willing to invest an exchange to bring this about the French Tarrasch, a pawn seems a modest price to pay.]

17...Bg6 18.Qe3 Kh8 19.Ne5

Now the weakness of the d4-pawn prevents White from taking on e6.

19...Nxe5 20.Bxe5 Bxe5



21.Qxe5 These positions always look statically better for White but Black has dynamic piece play on the f-file. Here he has a very active bishop on g6 which will feature in the coming play. **21...Qh4! 22.Qe3 Rf6 23.Rad1 Rcf8 24.Rd2 Nc8 25.Qg3**

[25.g3 Qh3 26.Qe5 Ne7 27.f4 is a more efficient way to deal with the pressure on f2, though after Nc6 28.Qe3 Black's only weakness (e6) is well covered and White has no advantage.]

11.Qxb3 **e6** **12.Nxe5** White players developed this line very deep in the past 2-3 years. This is a natural consequence of the fact that different attempts in many other lines failed to prove any advantage for White. **12...Nxd5N** A natural reaction to the latest developments in the theory of Alapin Variation - some Black players start to research older variations, which were forgotten once because other possibilities to neutralize White's initiative were established to be better. This tendency to look for rare alternatives happens mainly because the amount of theory in Anti-Sicilians increased dramatically lately and knowing just few general variations is not really enough any longer for Black to equalize. And instead of studying carefully many new games with lots of analysis, a reasonable alternative is to pick up more rare variations.

This approach is quite justified, since objectively Black has more possibilities to reach reasonable play in Anti-Sicilians. When one side is trying to reach opening advantage in sidelines (basically, all Anti-Sicilians are sidelines), there must be more than just one acceptable possibility to react. The more White players will analyze and find some mini-improvements in equal variations, the more their opponents will answer by finding clear ways to neutralize White's ideas. In this game Van der Wiel Black demonstrates another way for Black to solve opening problems against this particular line. In fact it's the merit of Pavel Tregubov, who showed that Black might easier solve all problems here than after 12...exd5.

It is curious that 2.c3 Sicilian remains a good research field for any level, appart

from the very top (World Championship matches, Candidate tournaments and matches, elite tournaments etc), which speaks a lot about its objective value. On that level the Alapin Variation does not pretend to represent even slightest headache for Black.

[12...exd5 13.Be3 Bd6 14.Qb5+ leads to complicated positions, with lots of new games and many resources for White to prove compensation for the pawn. B22: Sicilian: 2 c3
1.e4 c5 2.c3 Nf6 3.e5 Nd5 4.Nf3 d6 5.Bb5+!? This is a rare try to avoid the absolute mainlines after 5 d4 cxd4 6 cxd4 Nc6, which White may not have been aiming for with the 4 Nf3 move-order. It's definitely worth knowing how to meet this with Black, as the theory is still in its infancy and best play has yet to be seen OTB. **5...Bd7!**
[5...Nc6?! gives White very good chances of an opening advantage. 6.0-0 e6
A) 7.d4!? is a more typical Alapin approach. cxd4
A1) 8.Qxd4 Bd7! Breaking the pin immediately seems to be the best bet. *(8...Qb6?!* gives White some pressure after *9.Qxb6 Nxb6* 0-1 (66) Shimanov,A (2581)-Leitao,R (2592) chess. com INT 2022 *10.exd6 Bxd6 11.Rd1 Be7 12.Ne5* nabbing the two Bishops: *Bd7 13.Nxd7 Nxd7 14.Nd2 0-0-0* Black's lead in development isn't quite enough to offset the Bishop pair after *15.Nc4 Nde5 16.Be3±)* 9.Bxc6 Bxc6 10.Re1!?N Probably White's best attempt, but Black should be OK. *(10.Bg5?!* 1-0 (58) Broca Jimenez,F (2075) -Sammed Jaykumar,S (2449) chess. com INT 2023, looks logical, but Black has a good response: *Be7 11.Bxe7 Nxe7! 12.exd6 Nf5 13.Qf4 Qxd6 14.Qxd6 Nxd6 15.Nd4 Ke7 16.Nxc6+ bxc6∓* Black's split Queenside pawns can't easily be attacked and he has clear play down the b-file.*)* 10...dxe5 11.Nxe5 Qb6 12.Nxc6 Qxc6 13.Nd2 Rd8 This looks like a typically solid outcome from the Alapin for Black. 14.Nc4 Nf6 15.Qh4 *(15.Ne5* can be met by *Rxd4 16.Nxc6 Ra4!? 17.b3 Ra6!=* and the Rook looks to be doing a decent job on an unusual square! *)* 15...Be7 16.Ne5 Qc5 White can't exploit Black's King in the centre and Black castles successfully after 17.Qa4+ b5 18.Qc2 0-0= with no problems at all.;
A2) 8.cxd4 This position usually arises with the Bishop on c4 instead of b5. 8...Bd7
A2a) 9.Bc4!? is another option. White is a tempo down on the ...e7-e6 mainline as Black has managed to get in ... Bc8-d7 "for free". This move is generally useful for Black, but it's more often combined with ...Bd7-c6 and ...Nb8-d7. In this particular position, the extra tempo for development shouldn't hurt Black, but he must be wary of losing a pawn on d5 in several variations.
A2a1) 9...dxe5 10.dxe5 Rc8!? is also logical, as the d-pawn is poisoned. 11.Bxd5 exd5 12.Bg5! looks best, but it should peter out to equality after

(12.Qxd5? runs into *Nb4 13.Qxb7 Nc2 14.Nc3 Nxa1* White can regain the material by playing *15.Bg5 Qc7 16.Qxc7 Rxc7 17.Rxa1* but Black's extra exchange is to be preferred following *Rb7∓)* 12...Be7 13.Bxe7 Qxe7 14.Nc3 Bg4! 15.Nxd5 Qe6 White can't hang on to the extra pawn. 16.h3 Bxf3 17.Qxf3 0-0 18.Rad1 Qxe5=;

A2a2) 9...Nb6 This is an interesting approach for Black, trying to chase down White's light-squared Bishop. 10.Bb3 dxe5 11.dxe5 White's spatial advantage is potentially a serious issues and Black must play concretely: Na5!N *(11...Be7?!* isn't challenging: *12.Nc3 0-0 13.Qe2±* is comfortably better for White. *Qb8?!* 0-1 (53) Kretainis,K (2258)-Kovalenko,I (2611) Riga 2014 *14.Qe4±* looks very strong, with the typical Bb3-c2 to follow. *)*

A2a21) 12.Bc2 gives Black the chances to exchange Queens with Bb5! 13.Re1 Qxd1 and White doesn't have a comfortable way to recapture: 14.Bxd1 *(14.Rxd1 Be2! 15.Re1 Bxf3 16.gxf3 0-0-0∓* Black's better structure outweighs White's pair of Bishops. *)* 14...Nc6 15.Nc3 Bd3∓ Black has easy play here. He can put the Queen's Rook on d8, target the Knight on c3 with ... Bf8-b4 and put pressure on the e5-pawn with ...Nb6-d7.;

A2a22) 12.Nc3! White should simply continue developing and force Black to lose further time exchanging the light-squared Bishop. 12...Nxb3 13.axb3! This looks like the most challenging approach, placing the activity of the pieces above all other considerations. *(13.Qxb3* is also possible. For example, *Be7 14.Rd1 Qc7 15.Nb5!?* looks dangerous at first, but it simply leads to another typical structure after *Bxb5 16.Qxb5+ Qc6! 17.Qxc6+ bxc6 18.Be3 Nd5 19.Rac1 Kd7* Black's powerful Knight on d5 should offset his Queenside weaknesses. *20.Bc5 Bxc5 21.Rxc5 Rhb8 22.b3 a5* A standard plan for Black in this type of structure. *23.Nd4 a4 24.Rxc6 axb3 25.axb3* White has won a pawn, but it's hard to see it making much of an impact on the game after *g5!?⩱* with good

compensation for Black.*)* 13...Be7 14.Nd4 0-0 15.Qf3± retains the initiative for White, with Qf3-g3 to follow (assuming Black protects the b-pawn).;

A2b) 9.Nc3!? White "falls" for a typical pin-breaking idea, but this may well be the most dangerous approach. 9...Nxc3 10.bxc3 Nxe5!? This is critical, but the other capture on e5 is also perfectly possible. *(10...Nxe5!? 11.Rb1 Nxf3+ 12.Qxf3 d5=)*

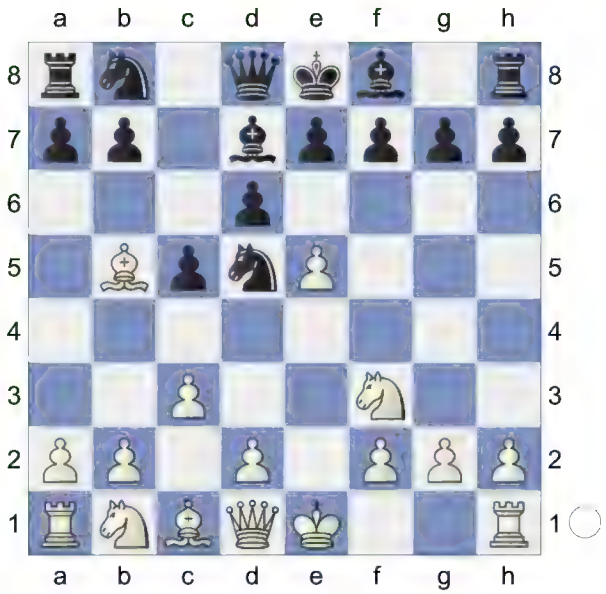
Black is generally advised to avoid this structure in the analogous lines of the Grand Prix Attack and with good reason: White's position is easy to play as the c5-pawn in particular presents him with a clear target.]



This is definitely the safest way to play. **6.Bc4** Black can't capture on e5 immediately and has to deal with the threat to the Knight. If he wasn't planning to play the ...e7-e6 set-ups, he has to go for 6. ..Nb6, and this gives White the interesting option of capturing on f7. **6...e6** This is very reliable, as ... Overall I would say that this line is a very good practical try for Black, and White really needs to know his stuff to secure an edge. The only issue is the move-order: after 6 d4, I can't see a way for Black to transpose to Sarana's set-up from this game. However, I think it can serve as a very useful weapon against the right opponent (namely one who likes to delay pushing his d-pawn!).

6.cxd4 d6 7.Bc4 dxe5 We'll cover this early capture of the e5-pawn in a couple of games this month. White has a choice of approaches. He can take the Knight on d5, which leads to very unbalanced positions. The most ambitious move is simply to recapture with the pawn, and this is featured in Khamrakulov - Stearman elsewhere in the update.
8.Nxe5!? This isn't mentioned by Shankland in his Classical Sicilian course for Chessable, where he recommends 7...dxe5 for Black. For that reason alone, it may be worth having this line in mind against well-prepared Black players, as it seems to lead to standard IQP positions at worst.

I am not sure what to make of this move. I have the impression that is should be playable, but White has so many different ways to try to get an advantage that I would be wary of trying it myself. This game ended up determining the clear winner of the 2008 European Championship. This game ended up determining the clear winner of the 2008 European Championship.Tiviakov: 'This game from the last round of the European Championship was extremely important. Only this victory allowed me to win the tournament alone, without any tie. There were 8 players in the lead before the start of the last round and I was the only one to win (the other 3 games were quick draws). Emil also offered me a draw in the evening before this game. But being White in the last round and also having a big positive score against Emil I saw no single reason to accept it.
' Tiviakov: 'Diese Partie aus der letzten Runde der Europameisterschaft war extrem wichtig. Nur durch diesen Erfolg war es mir möglich, alleiniger, ungeteilter Turniersieger zu werden. Vor dem Start der letzten Runde führten 8 Spieler punktgleich, und ich war der Einzige, der gewann. Emil hatte mir am Vorabend der Partie ebenfalls Remis angeboten. This game ended up determining the clear winner of the 2008 European Championship. This game ended up determining the clear winner of the 2008 European Championship.Tiviakov: 'This game from the last round of the European Championship was extremely important. Only this victory allowed me to win the tournament alone, without any tie. There were 8 players in the lead before the start of the last round and I was the only one to win (the other 3 games were quick draws). Emil also offered me a draw in the evening before this game. But being White in the last round and also having a big positive score against Emil I saw no single reason to accept it.
' Tiviakov: 'Diese Partie aus der letzten Runde der Europameisterschaft war extrem wichtig. Nur durch diesen Erfolg war es mir möglich, alleiniger, ungeteilter Turniersieger zu werden. Vor dem Start der letzten Runde führten 8 Spieler punktgleich, und ich war der Einzige, der gewann. Emil hatte mir am Vorabend der Partie ebenfalls Remis angeboten.
